

Summary of Data Warehousing with IBM Cloud Db2 Warehouse

Phase 01

- We have create or prepare a abstract about Data Warehousing and IBM Cloud Db2.
- Use that to you understand what we have to do in next phases.
- And also understand what is Data Warehouse and what is IBM cloud Db2.
- So, first we have create a abstract about Data Warehouse and IBM Cloud Db2.

Phase 02

- In that we have created a model diagrams and give explanations about the project.
- Diagrams and explanations clearly explained what is Data Warehouse and IBM Cloud Db2.
- Also explained why we are use?...and what is the use of this.

Phase 03

- In this what are requirements wants in develop a Data Warehouse project.
- And what are requirement tools want in this.
- Use this to create a model in phase 04.

Phase 04

- We have created a model of this project.
- We have use the IBM Cloud and written some sql statements in IBM Cloud and created a model for this project.
- This model explained about Data Warehouse and what are uses in that and why we are use this.
- So, we have explained about Data Warehouse and how to create a model.

Phase 05

- This is phase 05, so in this we have explained what we have done in previous phases or summary of this project.
- If anyone read these five phases, they can understand what is Data Warehousing.
